DAVID FLYNT

Lead Product Designer & Design Engineer | AI Systems, Financial UX & Complex Platforms

San Francisco Bay Area | (408) 409-4997 | davidflynt@gmail.com Portfolio: davidflynt.com | LinkedIn: linkedin.com/in/david-flynt-2979048

Lead Product Designer and Design Engineer with 8+ years architecting **enterprise platforms, complex financial workflows, and AI systems**. Combines systems thinking and **human in the loop craft** with production code fluency in **React, Next.js, and TypeScript**. Proven record translating ambiguous predictive models into trusted user experiences, aligning cross functional teams through **functional prototypes**, and shipping software that scales globally.

Experience

PaperTrail | SF Bay Area | Founding Lead Product Designer and Design Engineer
July 2025 - Present *AI expense review platform supported by Georgia Tech Create X*

Architected 0 to 1 product strategy and UX architecture, translating unstructured receipts into auditable Schedule E workflows while engineering production interfaces in **React, Next.js, TypeScript, and Tailwind CSS**.

Engineered threshold based review mechanics, deploying an **85% confidence design rule** that flags uncertain fields for owner review, comparing receipts beside editable values before saving.

Conducted usability research with 8 property owners, informing tax year chips. The beta reviews one receipt at a time; batch review remains on the roadmap.

Designed proactive financial guidance beyond static dashboards, structuring data visualizations to clarify deductible expense categories and support tax preparation.

Stellar Cyber | San Jose, CA | Product Designer, AI & Security Lead | Jan 2023 – July 2025
AI threat detection and intelligence platform spanning Series B to Series C growth

Led platform UX architecture supporting 2,800 weekly active users. A June 2025 snapshot showed 1,110 weekly active threat hunters and 18 standalone query pageviews.

Built an interactive prototype in code and Figma to address latency, accuracy, and API concerns, helping align product and engineering around persistent query blocks.

Integrated query creation into the investigation workflow with persistent notebook context and inspectable, editable backend syntax, replacing the standalone builder.

Standardized CVE progressive disclosure specs, pairing compact severity cues for rapid triage with on demand technical exploit vectors.

Designed cold storage query estimates and progress states, contributing to a $150K annual renewal alongside backend engineering and Customer Engineering.

Amazon Books Studio, Remote | UX Designer (Contract) | Jul 2022 – Oct 2022
Mobile *Consumer Growth Design*

Designed "Buy Next in Series" flows shipped on Amazon Mobile globally following Amazon design reviews within global component standards.

Designed inline edition swaps and confirmation states, informed by an unmoderated usability study with 20 participants and multivariate experimentation.

Cisco | San Jose, CA | Product Designer, Mass Infrastructure | Dec 2017 – Feb 2022 *Internal Tools, Enterprise Automation & Infrastructure Observability*

Unified fragmented network tools into a Single Pane of Glass workflow, contributing to shorter certification cycles from 6 months to 2 weeks across 10,000+ automated test cases.

Partnered with infrastructure engineers on Smart Debug, bringing model root cause predictions and timestamp correlated logs into one diagnostic workflow.

Governed an enterprise design system and telemetry library for an ecosystem serving 500+ active engineers and 35+ automation packages across 5 global teams.

Education

Georgia Institute of Technology – Create X Startup Accelerator Program

UC Irvine / UC Berkeley / UC Santa Cruz – Prof. Studies in GTM, Psychology, and Mobile Design

American Intercontinental University – B.F.A. in Visual Communication & Design

Core Areas of Expertise

AI & Systems Design: AI Native UX, Human in the Loop Systems, Agentic Workflows, LLM Interfaces, Threshold Based Review Mechanics, Information Architecture.

Observability & Analytics: Enterprise Telemetry, High Density Data Visualization, Evidence Graphs, Design Systems Governance.

Design Engineering: React, Next.js, TypeScript, Tailwind CSS, Supabase, Git, REST APIs, Figma, Cursor, Interactive Prototyping.
