DAVID FLYNT

Lead Product Designer & Design Engineer | Agentic Workflows, AI Systems & Dev Platforms

San Francisco Bay Area | (408) 409-4997 | davidflynt@gmail.com Portfolio: davidflynt.com | LinkedIn: linkedin.com/in/david-flynt-2979048

Lead Product Designer and Design Engineer with 8+ years architecting AI native systems, agentic workflows, and enterprise developer platforms. Combines systems thinking and human in the loop craft with production code fluency in **React, Next.js, TypeScript, and Cursor**. Proven record translating ambiguous AI capabilities into controllable, trustworthy experiences, using interactive prototypes to de-risk technical edge cases, and shipping production UI directly in the codebase.

Experience

PaperTrail | SF Bay Area | Founding Lead Product Designer & Architect | July 2025 - Present
AI powered financial observability platform supported by Georgia Tech Create X

Architected 0 to 1 product strategy and cross-platform UX across high density desktop workspaces and lightweight mobile review moments, shipping production code directly in **React, Next.js, TypeScript, and Tailwind CSS using Cursor**.

Engineered human in the loop supervision and approval patterns, deploying an **85% confidence threshold system** that calibrated user trust, flagged exception recovery states, and protected unit margins while ensuring full user control.

Conducted usability research with 8 operators, replacing high friction inputs with pre-scoped context chips and architecting real time batch supervision and intervention workflows.

Designed proactive AI guidance beyond static dashboards, structuring status transparency and data visualizations to clarify autonomous outputs and eliminate user uncertainty.

Stellar Cyber | San Jose, CA | Product Designer, AI & Security Lead | Jan 2023 – July 2025
AI threat detection and intelligence platform spanning Series B to Series C growth

Led platform UX architecture supporting 2,800 weekly active technical users, using behavioral telemetry to reveal that while 1,110 analysts hunted threats weekly, standalone query tools saw only 18 pageviews due to workflow silos.

Built the interactive consensus prototype for the AI Investigation Notebook, de-risking engineering concerns on **latency, model hallucination, error recovery, and API feasibility** to align the team and unify investigator workflows.

Shipped GenAI investigation workflows translating natural language into backend query syntax, enabling analysts to co-drive complex searches and cut Mean Time to Resolve.

Standardized CVE progressive disclosure specs, pairing compact severity cues for rapid

triage with on demand technical exploit telemetry across high density workspaces.

Architected asynchronous cold storage query workflows to eliminate system timeouts and preserve **$150K ARR**, while modernizing multi-tenant RBAC governance.

Amazon Books Studio, Remote | UX Designer (Contract) | Jul 2022 – Oct 2022
Mobile *Consumer Growth Design*

Designed and launched "Buy Next in Series" mobile flows for millions of users, passing executive design reviews within global cross-platform design standards.

Crafted lightweight mobile interactions, approvals, and gesture flows, partnering with data science on A/B experiments to lift engagement while meeting WCAG accessibility standards.

Cisco | San Jose, CA | Product Designer, Mass Infrastructure Group | Dec 2017 – Feb 2022
Internal Tools, Enterprise Automation & Infrastructure Observability

Unified fragmented developer and network tools into a Single Pane of Glass orchestration workspace, slashing test certification cycles from **6 months to 2 weeks** and cutting configuration errors by **30%**.

Designed UX architecture for Smart Debug, an ML observability platform that scored failure probabilities to help engineers supervise systems and prevent downtime.

Governed an enterprise design system and telemetry library adopted by **500+ engineers across 5 global teams**, cutting engineering lead time by **25%**.

Education

Georgia Institute of Technology – Create-X Startup Accelerator Program

UC Irvine / UC Berkeley / UC Santa Cruz – Prof. Studies in GTM, Psychology, and Mobile Design

American Intercontinental University – B.F.A. in Visual Communication & Design

Core Areas of Expertise

AI & Agentic Systems: Agentic Workflows, Human in the Loop Supervision, Co-Drive & Intervention Patterns, Calibrated Trust & Recovery States, LLM Interfaces, Information Architecture.

Observability & Developer UX: Developer Tools, Enterprise Telemetry, High Density Workspaces, Progressive Disclosure, Cross-Platform Design Systems Governance.

Design Engineering: React, Next.js, TypeScript, Tailwind CSS, Supabase, Git, CLI & IDE Workflows, REST APIs, Figma, Cursor, Interactive Prototyping.
